EDUCATION

Indian Institute of Information Technology, Ranchi

2022 – 2026

B.Tech in Computer Science and Engineering

CGPA: 7.94

Army Public School, Prayagraj

CBSE Board

Class XII: 93% | Class X: 93.8%

EXPERIENCE

Reelife Private Limited

June 2024 – August 2024

Full Stack Developer Intern

Remote

- Built and shipped **10+ production-ready React components** (product listing, cart, checkout, and authentication flows) that formed the core UI of the e-commerce platform, improving component reusability and reducing UI inconsistencies across pages.
- Engineered **end-to-end order and authentication workflows** using React Router, custom Hooks, and Axios, integrating REST APIs for product data, user sessions, and order state management with full error handling.
- Contributed to **backend development using Node.js and Express.js**, creating and modifying REST API routes for product management, user auth, and order processing; debugged API issues using Postman during feature development.
- Improved overall UX by **fixing form validation edge cases and error states** across checkout and auth flows, ensuring consistent cross-device behavior and smooth end-to-end functionality.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, C++, Python, SQL

Frontend: React.js, Next.js, Tailwind CSS, HTML/CSS, Shadcn UI, Zustand, React Router, Figma

Backend: Node.js, Express.js, REST APIs, JWT Authentication, Socket.io, Microservices, API Gateway

Databases: PostgreSQL, MongoDB, MySQL, Mongoose, Sequelize ORM, NeonDB

Developer Tools: Git, GitHub, Docker, AWS (EC2, S3), Postman, Vercel, VS Code

PROJECTS

AlgoNote – AI DSA Revision Platform | [GitHub](#) | [Live](#)

React, Node.js, Express, PostgreSQL, MongoDB, Sequelize, API Gateway, Docker, AWS EC2

- Architected a **microservices backend with API Gateway across 3 independent services** — unified service (files, problems, AI) on PostgreSQL, playlist service and profile analysis on MongoDB — each independently deployable via Docker Compose on AWS EC2.
- Built a **YouTube playlist-to-revision sheet pipeline** using YouTube Data API and OpenRouter to intelligently map playlist videos to LeetCode problems, auto-generating structured revision sheets in one click.
- Implemented **LeetCode one-click import** via LeetCode's public API, auto-fetching problem title, difficulty, tags, description and starter code directly into a Monaco-based multi-solution editor.
- Designed an **IDE-style file system with folder hierarchy**, profile-guided weak-area recommendations, and Clerk-authenticated gateway that scopes all data operations per user across services.

Veda AI – AI Question Paper Generator | [GitHub](#) | [Live](#)

Next.js, Node.js, Express, MongoDB, BullMQ, Redis, Socket.io, Clerk, OpenRouter

- Built a **full-stack AI-powered exam paper generator** where teachers configure question types, marks, sections, and difficulty — triggering an LLM pipeline via **OpenRouter (GPT-4o-mini)** to produce structured, syllabus-aligned question papers.
- Architected an **async job queue using BullMQ and Redis**, offloading generation to a background worker; streamed real-time progress events (queued → processing → completed/failed) to the client via **Socket.io**.
- Secured all routes with **Clerk auth middleware**; built **9+ REST endpoints** with Zod validation and a health diagnostics route monitoring MongoDB, Redis, and worker state; parsed uploaded PDF/TXT files with Multer as LLM context.

ACHIEVEMENTS

Competitive Programming: LeetCode — 480+ problems | **1767 rating** | 42+ contests | 93-day POTD streak | [Profile](#)

Leadership: Captain of Basketball Team — **Inter-IIIT tournaments 3 consecutive years** | Vice Head of Gaming Society — **3+ events**, 100+ participants
